

CSS Borders

The CSS border properties allow you to specify the style, width, and color of an element's border.

I have borders on all sides.

I have a red bottom border.

I have rounded borders.

I have a blue left border.

CSS Border Style

The `border-style` property specifies what kind of border to display.

The following values are allowed:

- `dotted` - Defines a dotted border
- `dashed` - Defines a dashed border
- `solid` - Defines a solid border
- `double` - Defines a double border
- `groove` - Defines a 3D grooved border. The effect depends on the border-color value
- `ridge` - Defines a 3D ridged border. The effect depends on the border-color value
- `inset` - Defines a 3D inset border. The effect depends on the border-color value
- `outset` - Defines a 3D outset border. The effect depends on the border-color value
- `none` - Defines no border
- `hidden` - Defines a hidden border

The `border-style` property can have from one to four values (for the top border, right border, bottom border, and the left border).

CSS Borders

Example

Demonstration of the different border styles:

```
p.dotted {border-style: dotted;}
p.dashed {border-style: dashed;}
p.solid {border-style: solid;}
p.double {border-style: double;}
p.groove {border-style: groove;}
p.ridge {border-style: ridge;}
p.inset {border-style: inset;}
p.outset {border-style: outset;}
p.none {border-style: none;}
p.hidden {border-style: hidden;}
p.mix {border-style: dotted dashed solid double;}
```

Result:

A dotted border.

A dashed border.

A solid border.

A double border.

A groove border. The effect depends on the border-color value.

A ridge border. The effect depends on the border-color value.

An inset border. The effect depends on the border-color value.

An outset border. The effect depends on the border-color value.

No border.

A hidden border.

A mixed border.

Note: None of the OTHER CSS border properties (which you will learn more about in the next chapters) will have ANY effect unless the `border-style` property is set!

CSS Borders

CSS Border Width

The `border-width` property specifies the width of the four borders.

The width can be set as a specific size (in px, pt, cm, em, etc) or by using one of the three pre-defined values: thin, medium, or thick:

Example

Demonstration of the different border widths:

```
p.one {  
    border-style: solid;  
    border-width: 5px;  
}  
p.two {  
    border-style: solid;  
    border-width: medium;  
}  
p.three {  
    border-style: dotted;  
    border-width: 2px;  
}  
p.four {  
    border-style: dotted;  
    border-width: thick;  
}
```

Result:

Specific Side Widths

The `border-width` property can have from one to four values (for the top border, right border, bottom border, and the left border):

```
p.one {  
    border-style: solid;  
    border-width: 5px 20px; /* 5px top and bottom, 20px on the sides */  
}  
p.two {  
    border-style: solid;  
    border-width: 20px 5px; /* 20px top and bottom, 5px on the sides */  
}  
p.three {  
    border-style: solid;  
    border-width: 25px 10px 4px 35px; /* 25px top, 10px right, 4px bottom  
and 35px left */  
}
```

CSS Borders

CSS Border Color

The `border-color` property is used to set the color of the four borders.

The color can be set by:

- name - specify a color name, like "red"
- HEX - specify a HEX value, like "#ff0000"
- RGB - specify a RGB value, like "rgb(255,0,0)"
- HSL - specify a HSL value, like "hsl(0, 100%, 50%)"
- transparent

Note: If `border-color` is not set, it inherits the color of the element.

Example

Demonstration of the different border colors:

```
p.one {  
  border-style: solid;  
  border-color: red;  
}  
  
p.two {  
  border-style: solid;  
  border-color: green;  
}  
  
p.three {  
  border-style: dotted;  
  border-color: blue;  
}
```

Result:

Red border

Green border

Blue border

CSS Borders

Specific Side Colors

The `border-color` property can have from one to four values (for the top border, right border, bottom border, and the left border).

Example

The `border-color` property can have from one to four values (for the top border, right border, bottom border, and the left border).

```
p.one {  
  border-style: solid;  
  border-color: red green blue yellow; /* red top, green right, blue  
bottom and yellow left */  
}
```

HEX Values

The color of the border can also be specified using a hexadecimal value (HEX):

Example

```
p.one {  
  border-style: solid;  
  border-color: #ff0000; /* red */  
}
```

RGB Values

Or by using RGB values:

Example

```
p.one {  
  border-style: solid;  
  border-color: rgb(255, 0, 0); /* red */  
}
```

HSL Values

You can also use HSL values:

Example

```
p.one {  
  border-style: solid;  
  border-color: hsl(0, 100%, 50%); /* red */  
}
```

CSS Borders

CSS Border - Individual Sides

In CSS, there are also properties for specifying each of the borders (top, right, bottom, and left):

Example

```
p {  
  border-top-style: dotted;  
  border-right-style: solid;  
  border-bottom-style: dotted;  
  border-left-style: solid;  
}
```

Result:

Different Border Styles

The example above gives the same result as this:

Example

```
p {  
  border-style: dotted solid;  
}
```

So, here is how it works:

If the **border-style** property has four values:

- **border-style: dotted solid double dashed;**
 - top border is dotted
 - right border is solid
 - bottom border is double
 - left border is dashed

If the **border-style** property has three values:

- **border-style: dotted solid double;**
 - top border is dotted
 - right and left borders are solid
 - bottom border is double

If the **border-style** property has two values:

- **border-style: dotted solid;**
 - top and bottom borders are dotted
 - right and left borders are solid

If the **border-style** property has one value:

- **border-style: dotted;**
 - all four borders are dotted.

CSS Borders

CSS Shorthand Border Property

To shorten the code, it is also possible to specify all the individual border properties in one property.

The `border` property is a shorthand property for the following individual border properties:

- `border-width`
- `border-style` (required)
- `border-color`

Example

```
p {  
  border: 5px solid red;  
}
```

It can also specify all the individual border properties for just one side:

Left Border

```
p {  
  border-left: 6px solid red;  
  background-color: lightgrey;  
}
```

Result:

Bottom Border

```
p {  
  border-bottom: 6px solid red;  
  background-color: lightgrey;  
}
```

Result:

CSS Borders

CSS Rounded Borders

The `border-radius` property is used to add rounded borders to an element:

Normal border

Round border

Rounder border

Roudest border

Example

```
p {  
  border: 2px solid red;  
  border-radius: 5px;  
}
```

All CSS Border Properties

Property	Description
border	Sets all the border properties in one declaration
border-bottom	Sets all the bottom border properties in one declaration
border-bottom-color	Sets the color of the bottom border
border-bottom-style	Sets the style of the bottom border
border-bottom-width	Sets the width of the bottom border
border-color	Sets the color of the four borders
border-left	Sets all the left border properties in one declaration
border-left-color	Sets the color of the left border
border-left-style	Sets the style of the left border
border-left-width	Sets the width of the left border
border-radius	Sets all the four border-*-radius properties for rounded corners
border-right	Sets all the right border properties in one declaration
border-right-color	Sets the color of the right border
border-right-style	Sets the style of the right border
border-right-width	Sets the width of the right border
border-style	Sets the style of the four borders
border-top	Sets all the top border properties in one declaration
border-top-color	Sets the color of the top border
border-top-style	Sets the style of the top border
border-top-width	Sets the width of the top border
border-width	Sets the width of the four borders

CSS Borders
