

CSS Height and Width

The CSS `height` and `width` properties are used to set the height and width of an element.

The CSS `max-width` property is used to set the maximum width of an element.

```
<!DOCTYPE html>
<html>
<head>
<style>
div {
    height: 50px;
    width: 100%;
    border: 1px solid #4CAF50;
}
</style>
</head>
<body><h2>CSS height and width properties</h2>
<div>This element has a height of 50 pixels and a width of 100%.</div>
</body>
</html>
```

CSS Setting height and width

The `height` and `width` properties are used to set the height and width of an element.

The height and width properties do not include padding, borders, or margins. It sets the height/width of the area inside the padding, border, and margin of the element.

CSS height and width Values

The `height` and `width` properties may have the following values:

- `auto` - This is default. The browser calculates the height and width
- `length` - Defines the height/width in px, cm etc.
- `%` - Defines the height/width in percent of the containing block
- `initial` - Sets the height/width to its default value
- `inherit` - The height/width will be inherited from its parent value

CSS Height and Width

CSS height and width Examples

Example

Set the height and width of a <div> element:

```
<!DOCTYPE html>
<html>
<head>
<style>
div {
    height: 200px;
    width: 50%;
    background-color: powderblue;
}
</style>
</head>
<body>
<h2>Set the height and width of an element</h2>
<div>This div element has a height of 200px and a width of 50%.</div>
</body>
</html>
```

Example

Set the height and width of another <div> element:

```
<!DOCTYPE html>
<html>
<head>
<style>
div {
    height: 100px;
    width: 500px;
    background-color: powderblue;
}
</style>
</head>
<body>
<h2>Set the height and width of an element</h2>
<div>This div element has a height of 100px and a width of 500px.</div>
</body>
</html>
```

Note: Remember that the `height` and `width` properties do not include padding, borders, or margins! They set the height/width of the area inside the padding, border, and margin of the element!

CSS Height and Width

Setting max-width

The `max-width` property is used to set the maximum width of an element.

The `max-width` can be specified in *length values*, like px, cm, etc., or in percent (%) of the containing block, or set to none (this is default. Means that there is no maximum width).

The problem with the `<div>` above occurs when the browser window is smaller than the width of the element (500px). The browser then adds a horizontal scrollbar to the page.

Using `max-width` instead, in this situation, will improve the browser's handling of small windows.

Tip: Drag the browser window to smaller than 500px wide, to see the difference between the two divs!

This element has a height of 100 pixels and a max-width of 500 pixels.

Note: The value of the `max-width` property overrides `width`.

Example

This `<div>` element has a height of 100 pixels and a max-width of 500 pixels:

```
<!DOCTYPE html>
<html>
<head>
<style>
div {
  max-width: 500px;
  height: 100px;
  background-color: powderblue;
}
</style>
</head>
<body>
<h2>Set the max-width of an element</h2>
<div>This div element has a height of 100px and a max-width of 500px.</div>
<p>Resize the browser window to see the effect.</p>
</body>
</html>
```

CSS Height and Width

All CSS Dimension Properties

Property	Description
<u>height</u>	Sets the height of an element
<u>max-height</u>	Sets the maximum height of an element
<u>max-width</u>	Sets the maximum width of an element
<u>min-height</u>	Sets the minimum height of an element
<u>min-width</u>	Sets the minimum width of an element
<u>width</u>	Sets the width of an element
